

Malware Analysis

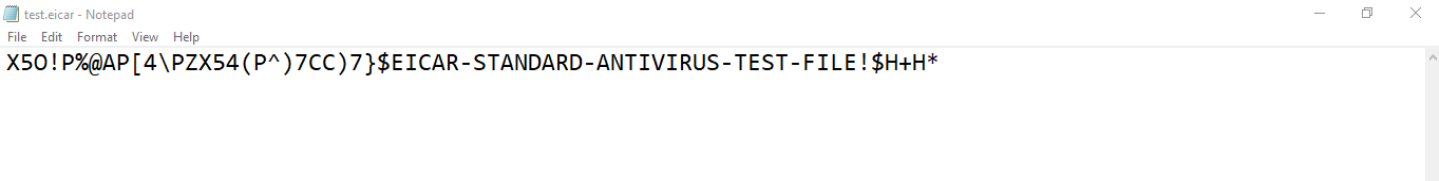

Tool: VirusTotal

Task: Upload a harmless file (e.g., test script) to check for threats.

EICAR Test: Create an EICAR test file (**echo X5O!P%@AP[4\PZX54(P^)7CC)7}\$EICAR-STANDARD-ANTIVIRUS-TEST-FILE!\$H+H* > test.eicar**) and upload to VirusTotal. Review detection results.

Sandbox Analysis: Submit the EICAR file to Hybrid Analysis and summarize the behavior report in 50 words.

Summary

The EICAR test file was created to check how antivirus or endpoint security software responds to a known test threat. After the file was created, the security software detected it and treated it as a threat. The file itself is harmless and does not perform any real malicious activity.
