

Rules of Engagement (RoE)

A Rules of Engagement (RoE) document was prepared to define the scope, objectives, authorized activities, limitations, and operational boundaries for the simulated Red Team assessment.

Engagement Scope

- **Target:** Metasploitable 2 virtual machine
- **Target IP:** 192.168.229.129
- **Environment:** Isolated and authorized laboratory environment
- **Assessment Objective:** Demonstrate controlled exploitation of the VSFTPD 2.3.4 vulnerability (CVE-2011-2523).
- **Reconnaissance:** Network and service enumeration using Nmap.
- **Exploitation:** Controlled exploitation using the Metasploit Framework.
- **Access Validation:** Verification of the established session and security context using getuid.
- **Impact Assessment:** Evaluate the potential security impact without performing destructive actions.

Authorized Activities

- Network and service reconnaissance.
- Vulnerability identification and analysis.
- Controlled exploitation of the identified vulnerability.
- Session establishment and access validation.
- Collection of screenshots and relevant technical evidence.
- Documentation of findings, impact, and remediation recommendations.

Restrictions

- Testing was restricted exclusively to the authorized Metasploitable 2 target.
- Data destruction or intentional modification of system data was prohibited.
- Persistence mechanisms were not implemented.
- Lateral movement to other systems was not performed.
- Activities affecting systems outside the defined scope were prohibited.
- Testing was limited to the isolated laboratory environment.

Evidence & Reporting

Relevant screenshots, technical observations, exploitation results, and access-validation evidence were documented for assessment purposes. Findings were recorded with appropriate impact and remediation recommendations.

Safety and Authorization

All activities were conducted within an authorized and isolated laboratory environment. The assessment was designed to demonstrate Red Team techniques while maintaining defined operational and safety boundaries.

The RoE served as the governing framework for the simulated engagement and ensured that all testing activities remained within the approved scope.
